

Motor and Sensor Ports

Reminder to adjust programming based on your own robot configuration.

Our robot is set up with these ports used.

- Left Motor connects to port B
- Right Motor connects to port C

- Left Light/colour sensor connects to port 3
- Right Light/colour sensor connects to port 2
- Ultrasonic sensor connects to port 4

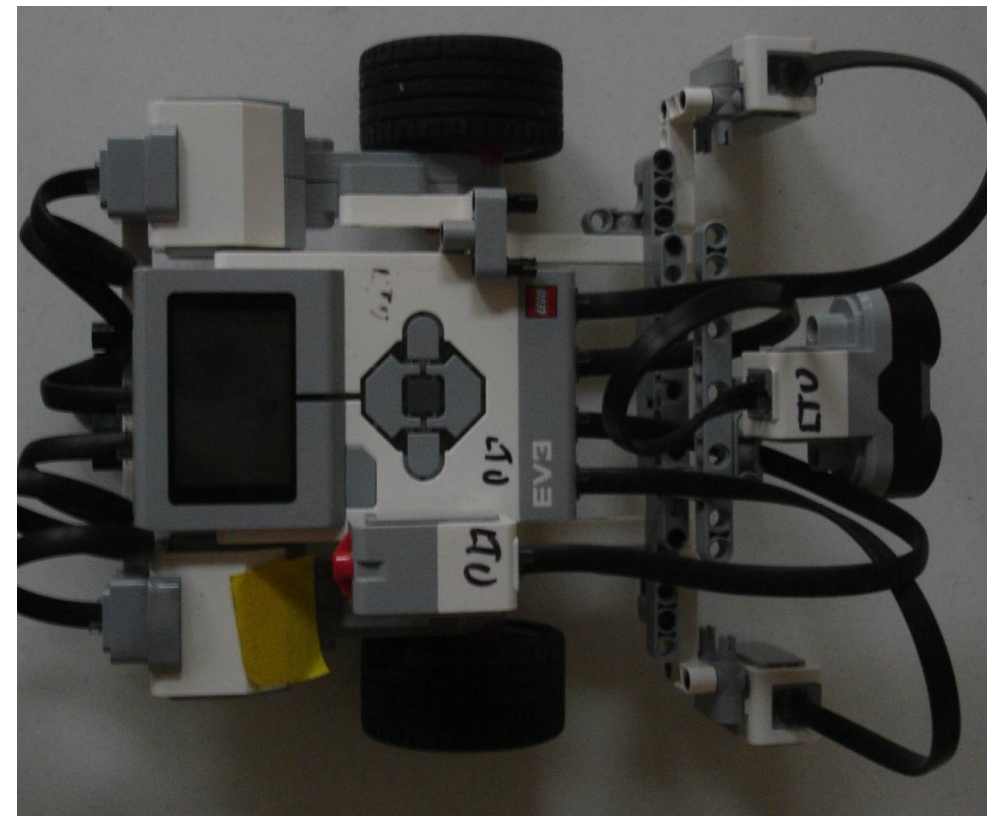

Robot Design

Rules on the robot size can be found in the **BottleSumo Time Trial rules**.

- One colour/light sensor - two is recommended for a better performing robot
- Your light/colour sensor(s) should be **IN FRONT** of your wheels. See *diagram*.
- Your team may choose any robot design they want as long as the team follows the robot rules provided for the event.
- For this tutorial the motors and sensor are assumed to be in the pictured configuration.

Left Motor B

LEFT Colour Sensor 3

EV3
Brick

UltraSonic
Sensor 4

Right Motor C

RIGHT Colour Sensor 2

If your robot is using different ports for your motors or sensors, please adjust your programming to reflect the ports you are using.
